

Genesys WB

Broad Spectrum Antiscalant

Genesys WB has been developed as a broad spectrum antiscalant for use in very small Reverse Osmosis and Nano-Filtration systems using less than 30 m³/day feed water. Genesys WB contains sodium bisulphite which removes residual chlorine from mains fed feed waters, thus protecting the membranes from oxidation without additional dosing equipment.

It is particularly effective in preventing calcium carbonate formation and all commonly found scaling species. It's effectiveness at a single dose rate means that a detailed water analysis is not necessary.

Genesys WB will continue to give maximum protection even when water analyses and operating conditions change.

Inhibits Scale Formation

Prevents Iron Fouling

Application

Genesys WB should be dosed continuously to the feed water upstream of the cartridge filter and should be diluted with good quality water.

The standard feed water dose rate is 50 mg/L.

Health and Safety

Genesys WB is an aqueous solution of partially neutralised phosphonic acid. It is compatible with carbon steel and all commonly used materials of construction.

Observe all safety precautions shown in the material safety data sheet, available on request.

Packaging

Available in 25 kg kegs and 200 kg drums.

Shelf life is 12 months under normal storage conditions.

Typical properties

Appearance: colourless liquid
pH as supplied: 6.0 - 6.5
Specific gravity: 1.09 - 1.13
Freezing point: < -2°C

- ✓ Suitable for Reverse Osmosis (RO) and Nano-Filtration (NF) membranes
- ✓ Compatible with all types of polyamide membranes
- ✓ Allows high recovery rates
- ✓ Replaces acid addition
- ✓ Simple test method
- ✓ Metabisulphite removes chlorine from feed water
- ✓ Inhibits common scales
 - Calcium carbonate/sulphate
 - Calcium phosphate
 - Barium/Strontium sulphate
 - Iron/Manganese
