**The Complete Solution**

### Inhibits Scale formation

### Prevents Iron Fouling

- ✓ Suitable for Reverse Osmosis (RO) and Nano-Filtration (NF) membranes
- ✓ Compatible with all types of polyamide membrane
- ✓ Allows high recovery rates
- ✓ Replaces acid addition
- ✓ Simple test method
- ✓ Metabisulphite removes chlorine from feed water
- ✓ Inhibits common scalants
  - ▶ Calcium carbonate/sulphate
  - ▶ Barium/Strontium sulphate
  - ▶ Calcium phosphate
  - ▶ Iron/Manganese

### Description

Genesys WB has been developed as a broad spectrum antiscalant for use in very small Reverse Osmosis and Nano-Filtration systems using less than 30 M<sup>3</sup>/day feed water. Genesys WB contains sodium bisulphite which removes residual chlorine from mains fed feed waters, thus protecting the membranes from oxidation without additional dosing equipment.

It is particularly effective in preventing calcium carbonate formation and all commonly found scaling species. Its effectiveness at a single dose rate means that a detailed water analysis is not necessary.

Genesys WB will continue to give maximum protection even when water analyses and operating conditions change.

### Application

Genesys WB should be dosed continuously to the feed water upstream of the cartridge filter and should be diluted with good quality water. The standard feed water dose rate is 50 mg/L.

### Health and Safety

Genesys WB is an aqueous solution of phosphonic acid. It is compatible with carbon steel and all commonly used materials of construction. A material safety data sheet is available on request.

### Classification

CHIP: Not Classified | UN: Non Hazardous

### Typical properties

Appearance: pale colourless liquid  
pH as supplied: 6.0 – 6.5  
Specific gravity: 1.08 – 1.10  
Freezing point: <-2°C

### Packaging

Available in 25 kg kegs and 200 kg drums.  
Shelf life 12 months under normal storage conditions.
